CLEVER YOUNG ACADIAN
Hon. Antoine J. LeGer, Provincial
Secretary-Treasurer in the New
Brunswick Cabinet.

M. D. Golden Centre

The second meeting of council of the M. D. of Golden Centre, No. 272, was held at N.E. ¼ of 13 30-5, on Saturday, April 2.

Members all present except councillor Stewart.

Oath of office taken by councillor Jorgenson.

The following lands were leased:—S.W. 7-30 5 to Jens Purcell; S.W. 28-30 5 to Thomas Barker; S.W. 13-30 4 to R. A. Gillespie; S.E. 23-29 4 to C. S. Cates; N.W. 22-29 4 to E. D. Thygesen; S½ 2-29 4 to John Braitenbach.

Fees were fixed as follows: For receive \$5 per day; for councillor \$4 per day. 10 cents for every mile necessarily travelled in attending meetings.

Fees for road inspection waived at \$4 per day and 10 cents for every mile necessarily travelled.

The following accounts were paid: Fees and mileage, paid: Fees 18.00; B. Morris 12.00; P. C. Hoard 21.00; Ed. Stewart 17.20; Frank Barker 15.00; A. Jorgenson 5.00; Ralph Green, March salary, 125.00; office expenses, 10.00; L. C. Michaels, rent, 6.00; Netherland Trusts Co., rebate of W.L. taxes 20.50; George Hallett, relief, 20.00; J. N. Oldham, solicitor's fees, \$1.40. Department of Municipal Affairs, act. 3 25; D. Cunningham, delivering wire, 2.00.

By-law No. 35, a by-law to provide for the imposition of a Business Tax was read twice. A committee attended council and requested a removal of the municipal office to Sedalia. It was decided to grant the ratepayers in the south side of the district a chance to present their views at next meeting. Council adjourned to meet at the call of the secretary.

Ralph Greene, Sec.-Treas.

Young People's Club
Will Present Play
On the evening of Easter Monday, the Young People's Club of Oyen, will present a three act comedy, entitled "Aaron Slick from Punkin Creek." The performance, which promises to be an unusually good one, will be given in Oyen Theatre, commencing at 8 p.m. The plot is a simple but well constructed one, and the lines well written and exceptionally funny, will keep the audience in a gale of laughter. Tickets are now on sale at 50 cents each, and it is hoped that the young players will be given the whole-hearted support of every one in the district.

Following the show there will be a grand dance, with a five piece orchestra in attendance.

SIR CHARLES HERBERT TUPPER
Son of one of the Fathers of Confederation, who has died of pneumonia in Vancouver.

WEDDING

OSLUND—HAMILTON

The wedding of Miss Margaret McQueen Hamilton, of London, Eng., and Mr. Frank Albin Oslund, of Gold Spring, Alberta, was quietly solemnized at the United Church parsonage, Oyen on Thursday, March 31, at 8 o'clock in the evening. Rev. C. R. Corcoran, officiating.

Mr. Albert J. C. Daniel, supported the groom, and Mrs. Daniel attended the bride.

Newsprint From Wheat Straw May Compete With Wood As New Process Is Developed

What material may be expected to supplement wood in the event of the war's consumption of paper, is tabulating anything resembling the per capita use of this commodity in the United States, asks the National Resources Intelligence Service, Department of the Interior, Ottawa. Will it be esparto grass which has been used extensively in the past and is still being used? Will it be bamboo which has been used to some extent? Or will it be straw? If the latter then Canada with its vast cereal-growing areas possesses great and permanent potential supplies. Straw material is looked upon as having great possibilities and recently a company was formed at Edmonton for the purpose of manufacturing paper from this material. If this mill succeeds it would justify a considerable and possibly a remarkable industrial development in the Canadian wheat fields.

Recent developments along similar lines in Italy may be of interest to Canadian agriculturists and capitalists. The points on which the Italian Government is interested in straw are the problems of production, a straw which will fulfill all the technical requirements of satisfactory newspaper paper has been the subject of intense research on the part of Italian industrial chemists for a number of years. The problem has now been successfully solved and the pulp is being produced on an industrial scale in the plants of the Società Italiana di Elettrochimica di Busset.

The latter mill which has a daily production capacity of 20 tons of pulp is said to be turning out approximately 10 tons of pulp a day for the paper industry. The Fomille process has the advantage of utilizing straw as a by-product in the production of electrolytic soda, which is a well developed chemical industry.

The problem of production costs has also been successfully solved, and the cost of production of newspaper paper containing approximately 50 per cent straw is claimed to be about 22 per cent less than ordinary newspaper paper, whose current price is about \$75 a short ton.

Experiments have found paper with 50 per cent straw and 50 per cent wood content suitable for printing purposes. Samples of the editions received show the paper to be of good quality and excellent color, but some what harder in finish and less absorbent to ink than the newspaper in general use in the United States and Canada. The paper is also slightly less opaque, and the printed sheet does not appear to have the clearness characteristic of American newspapers.

Meanwhile Canada maintains her position of the world leading country in the export of both wood pulp and wheat, and her pulpwood and cereal growing resources are so outstanding as to justify the opinion that she will remain the predominant factor in newspaper supplies no matter whether the final honors go either to spruce or to wheat straw.

Sprouting Potatoes

This Method Results in Forwarding the Crop About Seven Days

Tests at the Inverness, B.C., experimental station indicate that potatoes can profitably be started in this time between May 1st and June 15. After the latter date the result is poor. It was also proven that forwarding the crop seven days, early Northern sprouted potato May 15 was ready August 2nd, non-sprouted the same date was ready August 10th. The yield of sprouted was 25% tons per acre and of non-sprouted 20% tons. With New Market the results as regards time of readiness were the same, but the non-sprouted yielded slightly better, the result being sprouted 27 1/2 tons, non-sprouted 25 1/2 tons. Sprouting was effected by placing the tubers in a warm dust heated building three weeks prior to planting. Strong sturdy shoots about an inch long were the result.

A School For Freed Slaves

Alyshada has been much blamed for her lackwading in fulfilling promise to abolish slavery with her borders. There is news, however, that she has at least made a beginning. Through the British Consul, her husband, the late Taffari, has secured the help of the Anti-Slavery League in setting up a school in the Abyssinian capital for poor children and freed slaves.

An envelope is like a woman; it can't go anywhere without address.

Time Ball No Longer Needed

Greenwich Time Has Now Picked Up by Wireless

For two generations the Signal Tower at Deal has given the time of day to passing ships by the dropping of its Time Ball. Now the tower is to be closed and the ball will drop no more.

No one seems to know the tower's age, but in the old days it was used for semaphores and flag signalling to the ships lying in the roads between the shore and the Gosport. It was the last of a chain of signalling stations from the Admiralty in Whitehall.

With the coming of the telegraph the chain was no longer needed, and about 1862 the tower was put to a new use. It must have seemed a marvelous thing then that its electric apparatus from Greenwich could release this huge ball, a hollow disc four feet across, at the very moment the clocks of London were striking one. Outgoing ships must have found it invaluable for setting their chronometers.

Now, in the wireless age, it seems less startling to us that Greenwich time can be picked up anywhere. The tower has been used for a number of years as a time ball, and the signalling tower is pensioned off its work.

The Time Ball was raised by a wheel worked by hand a few minutes before the hour, and when the electric current released it its fall was broken by compressed air, a rubber cushion, and six strong spiral springs. All that has now been done for the last time, for the ball ceased to work recently.

A Mechanical Thinker

French Invention Solves Troubles of the Busy Executive

A mechanical thinker to remind office executives of their appointments and dates, has been invented in France.

It stands on the business man's desk. As he makes a memorandum of an order, appointment or idea to be executed at a certain time, he turns back a lever on the machine, to indicate the hour, day and month of the event. When the time comes, even if it is a year later, a light goes on and a bell rings.

The executive looks at the clock in the machine, notes the time it registers, runs down the memorandum sheet to the indicated time and reads the new instructions to himself.

The man who aims to be good in this world may miss it in the next.

No man or woman on earth really believes that the good die young.

Planting and Pruning Roses

Written by J. B. Spencer for Ontario Horticultural Association

Plants in abundance quantity require a sunny position and a good garden soil. What are known as hybrid Tea roses give the most continuous bloom throughout the summer while the Hybrid Perpetuals, which are somewhat harder and stronger grow, but in the old days it was used for semaphores and flag signalling to the ships lying in the roads between the shore and the Gosport. It was the last of a chain of signalling stations from the Admiralty in Whitehall.

With the coming of the telegraph the chain was no longer needed, and about 1862 the tower was put to a new use. Canada Holds Leading Place As Best Country in World For Raising of Domestic Fowl

Why is Canada the best country in the world in which to raise domestic fowl of all kinds? This is the question that thousands of people, who do not live in the Dominion, are asking themselves. They have been led to propound this query because of the magnificent display of birds made at Canada at the World's Poultry Congress in Spain in 1924, and also because of the fact that Canada holds the world's egg-production records both for a pen of hens and for an individual hen. As a consequence, they will gather in Ottawa for the third World's Poultry Congress from July 27 to August 4, 1927.

A good many Canadians may feel that because they do not know one breed of poultry from another they have no interest in this gathering. But, if so, they miss both the national and personal significance. In Europe, and particularly in Great Britain, the advancement in poultry raising is largely due to the personal and financial assistance given by leading citizens. His Majesty King George and the Prince of Wales (both of whom will have exhibits at Ottawa) are amongst the outstanding poultry breeders in the Empire, and their example is followed by hundreds whose purpose is patriotic and philanthropic. Persons who are interested in birds because they are more people interested in man. It is expected that the Congress in Ottawa will be attended by about 2000 persons, and delegates from outside Canada, hundreds of whom come with the idea of seeing the world's best birds, and such fine poultry would be a good thing for men and women from the over-crowded agricultural areas of Europe. The more delegates from different parts of Canada there are at the Congress the more likely the outside delegates will be to learn something of the different provinces and to take back with them an adequate conception of what the Dominion has to offer.

The Congress will include also many scientists of international reputation in biology, genetics, pathology, medicine, and all the other branches of the natural sciences. There will be a large number of British agricultural county societies and the representatives of the great importing houses of Western Europe. These will be, so to speak, in addition to the world's great experts in all lines of poultry breeding and in the production and marketing of poultry. All the necessary equipment and supplies. There will, therefore, be very much to interest all patriotic Canadians, whatever their profession or business.

Representatives of thirty different countries will attend, and there will be one of the greatest displays of poultry ever assembled, in which it is believed Canada's part will not be insignificant. The delegates will be welcomed by His Excellency the Governor-General, and by the Prime Minister, The Minister of Agriculture, the ministers of agriculture of the various provinces, and other prominent citizens are on the congress committee, which has all the details of the gathering under consideration.

The congress officers are: President, Mr. Edward Brown, London, England; director, Mr. F. C. Elliott, Dundas; secretary, Mr. Ernest Rhoades, Transpore Building, Ottawa.

Value of Prairie Crops

In 1925 Estimated World's Gold Output by \$70 Billion Dollars

The prairie provinces of Canada are richer in their output of wheat and other crops than all the gold mines of the world, according to the National Resources Intelligence Service, of the Department of the Interior, Ottawa, the value of these crops, the total gold output by \$70 billion dollars. The field crops of the three mid-western provinces were valued at \$100 million dollars (100 million dollars), the whole state is about five and a half billion dollars.

Split individuals have been vindicated by a noted mathematician, George Oliver Curme, Northwestern University, who has shown that the divided farm has been used for centuries by the best writers.

"You must be growing tired of me," said Mr. Newby. "You never call on me," said the other man's wife. "No," the man replied, "I am not; I am busy."

Old Trade Flourishes in New Land

Old trade flourishes in a new land. Recent wheat weaving has been successfully introduced at Point St. Charles, Saskatchewan town along the line of the Canadian Pacific Railway. The keen enthusiasm in handloom weaving at Point, and the general interest in the industry, has been traced to the energy of Rev. Father John Schmitt, and comes as the result of his recent visit to Great Britain. Father Schmitt, a Belgian, Switzerland and Italy. He investigated hand weaving in each country, studied the art himself, and on his return installed the loom.

Father Schmitt believes that the industry will foster home life in the rural districts, and will particularly encourage new settlers by providing them with a touch of the daily routine to which they are accustomed prior to their arrival in this country. Weaving is regarded as the nucleus around which other farm industries will prosper. This activity creates a demand for sheep raising, and hemp and flax growing. Anglier farmers, who are already engaged in sheep raising may be undertaken by members of farm families unable to carry on with the heavier duties of rural life.

Another clever device that the trustees shall have absolute power to interpret the will.

Discover Colonial Statue

Part of a colonial statue, believed to be of a Roman emperor has been discovered at Elms, near Albany. Only the head and the base have been recovered. The statue is of great beauty. According to the site of the head and bust, which have a total height of more than two and a half yards, the whole statue is about five and a half yards high.

A Good Idea

"It is an excellent practice to carry money always in more than one pocket," says a writer in an evening paper. This is a commendable idea, follows. Carry plenty of money at all times in every pocket. Nothing is a sorer trial to a man than to find himself with no money.

It has been claimed that 2,000 tons of dust per square mile were recently deposited in the vicinity of Tacoma, Wyoming.

With the exception of trouble the more the average man has the more he wants.

It is a good idea to carry money always in more than one pocket.

It is a good idea to carry money always in more than one pocket.

It is a good idea to carry money always in more than one pocket.
